Professional Summary

Data scientist with 8+ years building predictive models, applied LLM systems, and analytics infrastructure for high-growth technology companies. Track record of owning ambiguous, strategic problems end-to-end, from prototype to production, across healthtech, marketplaces, retail media, and ad tech. Comfortable moving between deep technical work and direct client partnership on attribution, value metrics, and model impact.

Technical Skills

- **Languages:** Python, SQL, JavaScript / TypeScript, Bash
- **ML & Statistics:** scikit-learn, XGBoost, predictive modeling, segmentation, survival analysis, A/B testing, causal inference, feature engineering
- **Applied AI / LLMs:** Prompt engineering, structured outputs, LLM-powered data pipelines, evaluation frameworks, agent orchestration
- **Data Infrastructure:** dbt, Airflow, Docker, FastAPI, AWS, RESTful APIs
- **BI & Visualization:** Looker, Tableau, Sigma, Mode

Experience

EvolutionIQ – Data Scientist

February 2026 - Present | New York, NY

- Designed and built Foundry, an internal CLI framework that standardizes analytics and ML pipeline development, enabling smooth migration from notebook prototypes to production workflows and shortening time-to-deployment for new models.
- Built an LLM-powered pipeline using Google Gemini to parse unstructured examiner notes at scale, detecting decision changes and generating structured labels that feed model evaluation and ground-truth datasets.
- Partner with ML engineering on production model evaluation, analyzing examiner agreement patterns to surface feedback signals that directly inform retraining priorities and model improvement cycles.
- Engage directly with insurer clients on attribution and value metrics, translating model performance into business impact and defending methodology to client analytics and operations leaders.
- Ship embedded Looker analytics surfaces shown directly to clients inside the application, translating model outputs into customer-facing insights that drive engagement with the product.
- Author dbt models and macros that power analytics-ready data layers across products, collaborating with analytics engineering on transformations and tests.

EvolutionIQ – Client Strategy & Advanced Analytics

July 2024 - February 2026 | New York, NY

- Led strategy and analytics for Long-Term Disability products deployed across eight major US and Canadian insurers, supporting over \$30M in contracted revenue.
- Built a Python framework to estimate remaining claim durations from historical termination rates, enabling scalable ROI measurement and pre/post impact studies across the entire client portfolio.
- Developed a KNN-based claim matching and benchmarking tool to identify comparable claim cohorts, providing rigorous evidence of product-driven performance improvements to client analytics teams.
- Advised executives at Fortune 500 insurers through benchmarking and strategic analyses, informing process changes that increased return-to-work outcomes.

Attentive – Revenue Analytics Manager: Go-To-Market Team

August 2022 - July 2024 | New York, NY

- Built a customer segmentation model (Python, scikit-learn, SQL) that predicted service tier from early account behavior with 90% accuracy, used to route accounts and prioritize retention efforts.
- Developed an ad spend projection model (Python, SciPy, power law) that captured performance degradation at scale, improving ROI forecasting and budget allocation across the customer base.

- Implemented a real-time pacing model for revenue monitoring, cutting forecast lag by over 90% and giving GTM leadership near-instant visibility into in-quarter performance.
- Founded the client analytics function, building tailored analyses and dashboards that improved enterprise campaign performance and retention.
- Analyzed datasets exceeding 1B rows using advanced SQL and Looker, building self-serve tooling that gave GTM teams direct access to insights without analyst dependencies.

DoorDash – Senior Business Analyst: Enterprise Analytics

May 2021 - August 2022 | New York, NY

- Designed a location optimization tool (Python, SQL) that evaluated consumer behavior, competition, and order density to identify high-revenue restaurant sites for enterprise merchants.
- Automated dashboard deprecation tracking in Python, saving 40+ analyst hours per month and streamlining the analytics catalog.
- Built self-serve reporting in Sigma and Tableau that reduced ad hoc requests and gave enterprise stakeholders direct access to merchant performance data.

Criteo – Data Analyst: Retail Media

November 2020 - May 2021 | New York, NY

- Built a Python library to standardize retailer reporting and automate SFTP delivery, saving 20+ hours per month across the team.
- Conducted ad hoc retailer performance analyses in SQL and Python, translating data into actionable insights for internal and client teams.

Known – Senior Data Analyst: Media Activation

November 2019 - November 2020 | New York, NY

- Managed digital campaigns for Fortune 500 clients, achieving 5x average ROAS through data-driven targeting and performance optimization.
- Designed a mid-funnel optimization strategy that increased low-volume conversions by 2.3x and reduced cost-per-conversion by 56% over three months.
- Automated data ingestion using Airflow and ad platform APIs (Facebook, Google Ads), improving accuracy and scalability of reporting pipelines.

Known – QA Engineer

February 2018 - November 2019 | New York, NY

- Built QA testing infrastructure (Airflow, Pytest, Pandas) for an ad management platform serving Fortune 500 clients, ensuring data accuracy across ETL pipelines.
- Developed automated data validation processes, reducing runtime errors by 26% through expanded test coverage.

Education

Flatiron School — Web Development Certificate (Ruby on Rails / JavaScript)

November 2017 | New York, NY

New York University, Leonard N. Stern School of Business — B.Sc. in Finance and Data Science

June 2017 | New York, NY
